A National Statistics publication

Official statistics bearing the National Statistics logo are
produced to high professional standards set out in the National
Statistics Code of Practice. They undergo regular quality
assurance reviews to ensure that they meet customer needs.
They are produced free from any political interference.

About the Office for National Statistics

The Office for National Statistics (ONS) is the government
agency responsible for compiling, analysing and disseminating
many of the United Kingdom's economic, social and demo-
graphic statistics, including the retail prices index, trade figures
and labour market data, as well as the periodic census of the
population and health statistics. The Director of ONS is also the
National Statistician and the Registrar General for England and
Wales, and the agency administers the statutory registration of
births, marriages and deaths there.

Introduction

Abortion statistics 2001 presents statistics relating to legally induced abortions within England and Wales during 2000. Statistics for earlier years and separate statistics for Scotland are published as follows:

For England and Wales - in the *Registrar General's Statistical Review of England and Wales, Supplement on Abortion, 1968 to 1973* and *Abortion Statistics*, Series AB nos. 1 to 27 for the years 1974 to 2000.

For Scotland - annually in the *Scottish Health Statistics* (2001 abortions data in 2002 edition).

General

The Abortion Act 1967, which came into effect on 27 April 1968, permits termination of pregnancy by a registered practitioner subject to certain conditions. In its application to England and Wales, regulations made under the Act (The Abortion Regulations 1968, Statutory Instrument 1968 No. 390 as amended by 1969 No. 636, 1976 No. 15, 1980 No. 1724 and 1991 No. 499) require any such termination to be notified within seven days, in the form prescribed in Schedule 2 of the principal Regulation, to the Chief Medical Officer of the Department of Health or to the Chief Medical Officer of the National Assembly of Wales according to where the termination takes place. Section 37 of the Human Fertilisation and Embryology Act 1990 made changes to the Abortion Act 1967. These changes came into effect on 1 April 1991 and the content of the notification of abortion form (Form HSA4) was amended to reflect the changed law. By arrangement, the Office for National Statistics undertakes the statistical processing and analyses of the notifications. This publication gives some statistics derived from them for England and Wales for 2001. Terminations of pregnancy to Scottish residents carried out in England and Wales, are included in this volume, and are also included and analysed in the Scottish publication. This volume does not include England and Wales residents who had a termination of pregnancy in Scotland - in 2001 there were 11. The following paragraphs set out the background to these statistics and the definitions used in compiling them.

Changes to the information collected from 18 April 2002

Following extensive consultation on the content of the abortion notification form, the Abortion (Amendment) (England) Regulations 2002, which came into force on 18 April 2002, amend the information required to be sent to the relevant Chief Medical Officer. More information can be found at www.doh.gov.uk/hsa4/index.htm or by

e-mailing HSA4@doh.gsi.gov.uk and will also be shown in the publication of the 2002 abortion statistics next year.

The Department of Health has taken over the statistical processing and analysis work and contact details are at the end of this section.

Conditions of the Act and statutory grounds

A legally induced abortion must be:

- a) performed by a registered medical practitioner,
- b) performed, except in an emergency, in a National Health Service hospital or in a place for the time being approved for the purpose of the Act, and
- c) certified by two registered medical practitioners as justified under one or more of the following grounds:

- A the continuance of the pregnancy would involve risk to the life of the pregnant woman greater than if the pregnancy were terminated;
- B the termination is necessary to prevent grave permanent injury to the physical or mental health of the pregnant woman;
- C the continuance of the pregnancy would involve risk, greater than if the pregnancy were terminated, of injury to the physical or mental health of the pregnant woman;
- D the continuance of the pregnancy would involve risk, greater than if the pregnancy were terminated, of injury to the physical or mental health of any existing child(ren) of the family of the pregnant woman;
- E there is a substantial risk that if the child were born it would suffer from such physical or mental abnormalities as to be seriously handicapped;

or in emergency, certified by the operating practitioner as immediately necessary -

- F to save the life of the pregnant woman; or
- G to prevent grave permanent injury to the physical or mental health of the pregnant woman.

The Act provides that in relation to grounds C and D the certifying practitioner may take account of the pregnant woman's actual or reasonably foreseeable environment.

The changes made to the Abortion Act 1967 by Section 37 of the Human Fertilisation and Embryology Act 1990 came into effect on 1 April 1991 and were summarised in *Abortion statistics 1991*, Series AB no. 18. The changes included a time limit of 24 weeks for abortions under statutory grounds C and D. Statutory grounds A, B and E are without time limit.

Combinations of grounds may be recorded and the following groupings are used in this volume:

1. A (alone, or with B, C or D)
2. B (alone)
3. B (with C or D)
4. C (alone)
5. D (alone, or with C)
6. E (alone)
7. E (with A, B, C or D)
8. F or G.

Data included in the tables

The figures in the main tables are derived from the notifications received (during 2001 and up to the mid June 2002) relating to legally induced abortions which took place in England and Wales in 2001. Incomplete or incorrect forms were returned to practitioners and 191 are still being followed up. 153 of these notifications have been included in the tables, with missing values imputed where necessary. Details of the values imputed are shown in Table A. The remaining 37 contained insufficient information to be included in the statistics. The number of abortions performed in 2001 has been updated since the publication of the ONS Health Statistics Quarterly summer 2002 edition.

Table A Number of cases with imputed values

Item of information	Imputed value	Number of cases imputed
Gestation weeks	under 9; 9-12	18;13
Procedure	vacuum aspiration	16
Grounds	C	55

A summary of the information included in the tables is given in **Appendix B**.

Age and marital status

The notification form asks for the woman's date of birth and the age tabulated is that of the last birthday before the operation. For all relevant tables, the age categories used are: under 15, 15, 16–19, 20–24, 25–29, 30–34, 35–39, 40–44, 45 and over. **Table 19** presents single years data for the 16–19 age group by area of usual residence.

The categories of marital status distinguished on the form are (a) single, (b) married, (c) widowed, (d) divorced and (e) separated. To calculate rates (**Table 3b**) it is necessary to include separated with married because there are no population estimates for the 'separated' marital status category. Rates for *all ages* (**Tables 3b** and **15b**) are calculated on the basis of abortions performed at *all ages* (including those under 15 and over 44) in relation to the population of resident women who are aged 15–44. The

populations used for the calculation of rates are given in **Appendix C**.

As mid-2000 population estimates are not yet available, the crude and age-standardised all-ages abortion rates shown in Table 1 have been calculated using as denominators the 1998-based population projections for 2001. These projections are not available to the detail required for Tables 3b and 15b; for these tables the rates have been calculated using the mid-2000 population estimates. Because of this, the all-ages crude rate in tables 3b and 15b is very slightly different from that shown in Table 1. When the 2001 census based estimates for mid-2001 are available, rates will be recalculated.

Area of usual residence

Tables 15a, 15b, 16, 17, 19, 20 and **21** are derived from the statement of the woman's usual address. As temporary residence may sometimes be stated in place of usual residence, the 'usual residence' figures may be misleading. **Tables 15a, 15b, 17** and **19** are by Regional offices and/or health authorities of usual residence. **Tables 16, 18** and **21** are by Regional office of termination, and **Table 21** includes 'Home HA' and 'Other HA' of termination. **Table 24a** is by country of usual residence.

Category of premises/purchaser

Except in an emergency, abortion operations may only be carried out in NHS hospitals, in certain approved Services' hospitals or in other premises specifically approved by the Secretary of State. At the end of 2001 there were 78 such approved places and 2 Services' hospitals. In the tables, Services' hospitals are included under NHS hospitals.

Since 1992, the presentation of information on category of premises has been changed to reflect changes in health service provision and funding. Previously, abortions were split between NHS and non-NHS premises, with agency cases (operations carried out in the independent sector on NHS patients) included as a sub-group of the non-NHS category. Currently, data are presented in terms of 'purchaser', with three discrete categories: NHS, NHS agency and non-NHS. **Tables 1, 2, 6, 7, 8, 9, 10, 12, 16, 17, 18,** and **21** show numbers by purchaser.

Complications

The question under this heading relates only to the complications which occur after the procedure has taken place but before the abortion is notified. The form identifies the three main complications - sepsis, haemorrhage and uterine perforation, and provides for others to be specified. **Table 13** shows cases of sepsis, haemorrhage and uterine perforation, and 'other' complications by three gestation periods for residents in 2001 with rates per 1,000 abortions.

The equivalent table for non-residents is **Table 24d**. An examination of these same categories, in relation to the method of termination and gestation period can be found in **Table 14** for residents only and **Table 24c** presents complications by age for non-residents.

Derivation of data

Details of the form of questions on the notification form, which are used to derive the figures shown in this volume, are given in **Appendix A**.

Gestation period

The notification form provides for a statement of the gestation period in weeks and seeks a direct statement of gestation and the basis on which it is derived. When no indication is given a value is imputed - see **Table A**. **Tables 8a, 23** and **24b** show counts for abortions performed beyond 24 weeks. Abortions at less than 169 days gestation are excluded from these counts.

Medical conditions

The notification form requires information about the medical condition found or reported and any diagnosis or suspected condition of the fetus. Medical condition(s) are classified by *International Statistical Classification of Diseases and Related Health Problems (10th Revision, 1992)*. **Table 23** of this volume shows abortions performed in 2001 under Grounds E by principal medical condition.

Table 22 summarises terminations associated with rubella by annual occurrence.

Non-residents

Non-residents (women whose usual residence was stated to be outside England and Wales) are shown separately in **Tables 24a, 24c, 24d** and included alongside residents of England and Wales in **Table 1**. Countries of usual residence where the number of terminations exceeds 10 are shown separately. **Table 8a**, presents residents and non-residents separately for terminations beyond 24 weeks gestation.

Operation

Six main operative methods (surgical or medical) are listed on the form with provision for specifying any other method. **Tables 2, 12, 17** and **24c** analyse single methods and certain combinations of methods. Each woman is counted once only.

On 1 July 1991 the UK Licensing Authority approved the use of the abortifacient drug Mifegyne (mifepristone, also known as RU486) to terminate pregnancy. In the 1991 volume, abortions carried out in this way were included within the procedure category 'prostaglandins with other agents'. Since

1992 such abortions are identified in a separate procedure category 'antiprogestosterone with or without prostaglandins'.

Parity

The form requires the number of the woman's previous (a) live births, (b) stillbirths and (c) abortions (spontaneous miscarriages and legal terminations separately) to be stated. In all tables including parity in the analysis (**Tables 5, 10, 11, 17, 18** and **21**) this is defined as the number of previous live births and stillbirths together, in order to equate more exactly with statistics derived from the registration of births.

Table 17 also shows the number of women who have had a previous legal abortion under the Act by the woman's age and Regional office area of usual residence.

Regional office area of operation

Hospitals and approved places are classified to the Regional office area in which they are situated.

Sterilisation

Where no answer was provided to this question it was assumed that sterilisation was not performed

Further publications and additional information

In addition to the information in this volume, selected abortion statistics are published in *Health Statistics Quarterly*. The commentary on 2001 abortion statistics will be published in the winter 2002 edition of this journal. *Health Statistics Quarterly* is for sale by annual subscription or by standing order from the Stationery Office (addresses on the back cover of this volume).

Enquiries about the availability of further abortion statistics should be addressed to:

For the years 1990-1994 the figures have been revised to take account of duplicate record counts and to include valid records which were excluded in previously published data.

* For the years 1990-1994, ICD 9 codes to represent Rubella are: 056 and 771.0 = Rubella, disease; V01.4 = Rubella, contact; V04.3 = Rubella, immunisation; 647.5 = Rubella, complicating pregnancy, childbirth and the puerperium.

* For the 1995-2001, ICD 10 codes to represent Rubella are: B069 = Rubella, disease; O353 = Rubella, contact; Z245 = Rubella, immunisation.

Appendices

Appendix A Derivation of data

The statistics presented in this publication are based on information in answer to the questions on the abortion notification form on the following lines:

1. Name and address of operating practitioner.
2. Name and address of place of termination.
3. Whether the patient was an NHS case terminated in an approved place under an agency agreement.
4. Name and address of woman having the termination.
5. Date of birth of woman.
6. Marital status of woman.
7. Parity (number of woman's previous live births, stillbirths, spontaneous miscarriages, legal terminations).
8. Date of admission to place of termination.
9. Date of termination.
10. Date of discharge from place of termination.
11. Gestation period and method of estimation.
12. Statutory grounds for terminating the pregnancy.
13. Medical condition of the woman, or the diagnosis or suspected medical condition of the fetus.
14. Statement of medical condition of the woman/fetus if pregnancy was terminated after it had exceeded its 24th week.
15. Whether a selective termination of a multiple pregnancy was performed.
16. Method used to carry out termination.
17. Complications prior to notification.
18. Whether a sterilisation operation was performed.
19. In case of death, the date and cause.
20. Termination of pregnancy using antiprogesterone with prostaglandin.
